Continuation of 11, does NOT place the application in condition for allowance because:

The primary reason that Green inserts blank P-frames is to achieve varying playback speeds, while the conservation of memory resources is a secondary benefit. Green provides that any combination of I-frames and P-frames can be used depending on the desired playback speed. For example, to achieve a factor of four, 3 frames are inserted between I-frames instead of the original 15 frames. Paras. 65-68. Following this principle, in order to achieve a 15-times playback rate, Green would simply insert no blank frames. Thus, playing back only I-frames only, as in the combination of Green and Boxve. is in fact a specific case of Green's ceneral principle, not contrary to it.

The Examiner has not overlooked the differences between the claimed invention and Green. To the contrary, the differences are acknowledged and deemed patentably insignificant in view of other prior art, namely Boyce as described in the rejection. Applicant alleges that Green is deficient because it does not ache separated Irfarmes during a standard play mode, but rather does so only in response to a trick play mode. Even assuming that were true, the claim does not require that the caching be done prior to a trick play command. Moreover, Examiner maintains that "standard play mode" can mean "other than a specialized mode." Such an interpretation is borne not of desire or convenience, but a reasponsibility to give the claims their broadest reasonable interpretation.

Regarding claims 2 and 12. Applicant argues that the modification would render Green inoperable. Examiner disagrees. Green provides for caching of I-frames (along with other frames) during playback, and one skilled in the art could use a similar buffer to store I-frames only as taught by Boyce. Green provides for fast-forwarding and rewinding which would suggest that I-frame from before and after playback position must be indexed. Thus motivated by Boyce to cache (instead of index) the separated I-frames, one of ordinary skill would include I-frames from both before and after to facilitate rewind and fast-forward, respectively.
